Overview

The Route Detail report is a one page dashboard style report that displays all information related to the selected route. Select the route from the drop-down list box. Select two years to compare. Save your changes so that you won't have to select them again next time you open this report.

The Route Detail template provides annual delivery route	Route			
information in the form a dashboard report. A dashboard report is a one page report that shows relevant information in	100 100 LA MONDAY			
a summarized, visually appealing Excel spreadsheet.	Current Year	2011 🚔	Previous Year	r 2010 🚔
New the monthly movement of sales and Year To-Date sales, cost and port amounts and percentages. Information in this section should match the Delivery Route Profitability report in DAC. Graphically view the Top and Button customers for the selected mutte to compare profit percentages over the current year to a previous year.			J

Select Route Data

Check off the data to export to Excel. Mandatory data is grayed out and can't be unselected. Select only the data you need so that the report runs faster. Enter the number of rows to display in the Top/Bottom Analysis section. The report graphs the 6 most profitable and least profitable customers, so the Rows to Display field should contain at least 6. Entering a value more than 20 could really slow things down.

Exported Report

Click on the Export button to create the multi-spreadsheet linked files in Excel. The "C:\DACOffice\DACRouteDetail.xlsx" file contains the raw DAC data. The "C:\DACOffice\DACTRouteDetail.xlsx" contains the dashboard report. This report will be changed to a single, stand-alone dashboard report in the upcoming months.
